FREDERIQUE CONSTANT

PHILOSOPHY & BRAND VALUES

Born in 1988 from the passion that Aletta and Peter Stas share for refined watches, Frederique Constant does not only offer Swiss luxury timepieces, but also makes them accessible to watch lovers and connoisseurs alike.

Since the early 18th Century, Geneva has been known as a major center for the creation and production of fine timepieces. Over the past 300 years, the city's watchmakers have risen to unparalleled heights in the Art of Horology. Frederique Constant's watchmakers are the Maison's most important assets, as each of its watches is individually assembled by hand.

Most of the world's famous watch manufacturers are based in Geneva. The concentration of so many rare skills on the same location, along with the presence of the best suppliers and the exchange of information allow brands such as Frederique Constant to remain at the forefront of precision watchmaking.

LET MORE PEOPLE ENJOY LUXURY

Our aim is not to restrict the interest in Frederique Constant watches to a limited and elitist circle of connoisseurs, but rather to a broader selection of appreciative enthusiasts who want to enjoy Swiss high-quality classical watches at sensible prices.

Frederique Constant's mission is therefore to apply the following three values to the development process of each model: design, quality and innovation.

MANUFACTURE

HISTORY

IN 2004

Frederique Constant entered the elite circle of Swiss watch-making brands to develop and assemble their own in-house calibers. Consequently, Frederique Constant became a “Manufacture”: in-house developed, in-house assembled.

IN 2006

In 2006, the Brand first felt the need to enlarge its production facilities and strategically decided to move into a 3200 m2 building in Plan-les-Ouates. After eleven years, Frederique Constant ran out of space due to its rapid growth and high demand from its worldwide markets. Two years were then needed to achieve the construction of an additional 3000 m2 space, bringing the Frederique Constant Group’s headquarters up to 6200 m2, thus enabling to completely re-organise the implementation of the different working areas.

On the ground floor, the visitors will find an exclusive dedicated space where they will have the chance to take on a Manufacture Experience tour, allowing them to discover each Brand’s universe and history (Frederique Constant, Alpina Watches, Ateliers deMonaco). On the first floor, all production workshops from T1 to T4 have been regrouped, thus optimizing watchmaking workflow and logistics. Offices including Top Management, Finance, Human Resources, Marketing, Sales and Administration departments have been spread on the second floor.

TODAY

Frederique Constant has gradually become an important player within the watchmaking industry. With the ambition to offer the best quality at the most appropriate prices, the Maison hasn’t stopped investing in production equipment. Besides surrounding ourselves with highly qualified watchmakers, we have developed all our departments to be able to control the various stages of the production of our watches, from initial conception to the final quality control, including assembly.

Manufacture Experience area.

MANUFACTURE

FROM SKETCHES TO PRODUCTION

DESIGN AND CONCEPTION

When creating a new Manufacture timepiece, designer and engineer work hand in hand to start a meticulous building process. While the designer is in charge of shaping the exterior of the watch, the engineer gives birth to the movement, which will bring this silhouette alive.

Component by component, layer by layer, each piece of the watch is carefully studied. Once the concept is validated thanks to 3D design modelling tools, the prototyping phase starts. A watch prototype allows our teams to evaluate its relevance in terms of function, technicity and design, once it is worn.

TO WORKSHOP – MACHINING

The manufacturing process of a watch starts in the so-called T0 workshop. It is where our engineers produce the brass plates for the Manufacture collection, constituting the first element of the movement. Using CNC machines, the latter are programmed to shape the plates – and also the bridges – according to the designs of the R&D team. After milling, the plates are cleaned up and the rough edges removed, using polishing tools. A meticulous work, it reflects Frederique Constant's luxury standards.

The plates are then sent to a finishing unit which applies rhodium plating, before ending up in the T1 workshop for assembly.

DECORATION

It is not to mention that each visible component of our manufactured timepieces is beautifully decorated. The aim being that every time one gazes at a Frederique Constant Manufacture watch, one is bound to feel joy. Detailed engravings, circular Côtes de Genève pattern and perlage enhance the movement's part.

MANUFACTURE

THE MANUFACTURING PROCESS

T1 WORKSHOP - MOVEMENTS ASSEMBLY

Commonly called T1 internally at Frederique Constant, this Manufacture's workshop is highly technical, as it is dedicated to the assembly of our in-house movements. Our watchmakers and master watchmakers undertake long and fastidious work, for which patience, experience and know-how is required.

They handle delicate and fragile components and have to be very precise with every gesture. Some Frederique Constant movements are made up from more than a hundred components. They assemble, adjust and control all our mechanical movements to make sure everything functions properly. Mainly all assembly operations and settings are made by hand, to ensure our watches are provided with the highest quality: jewelling, oiling, balancing the pendulum, just to name a few.

MANUFACTURE

THE MANUFACTURING PROCESS

T2 WORKSHOP - ENCASING

The assembly workshop at Frederique Constant, or T2, is dedicated to all the operations necessary for the encasing of the watch. Our watchmakers carefully handle all the different parts that constitute the watch: the movement, the case, the dial and the hands. Every Frederique Constant watch is assembled by hand.

The cleanliness of this workshop is extremely important, in order to prevent any foreign matter to penetrate into the movements and constricting the smooth functioning of our watches.

MANUFACTURE

THE MANUFACTURING PROCESS

T3 WORKSHOP - QUALITY CONTROL

All Frederique Constant timepieces are submitted to a very extensive series of tests. Each watch will be tested to ensure optimum performance, a further step in which our controllers re-test all the functions of the watch: jump the date, time settings, winding (if the watch is mechanical) and so on. Mechanical watches with automatic winding system undergo another series of tests that will differ depending on the complexity of the movement: rate and amplitude tests, and the power reserve's resistance. But if one of these tests does not meet our quality standards, the watch will return to the production cycle until it reaches a perfect accuracy.

MANUFACTURE

A CAREFUL ATTENTION

AFTER-SALES SERVICES

All Frederique Constant timepieces are guaranteed for two years, parts and labor, for a normal use of the watch. The Frederique Constant movements, either quartz or mechanical, need to be revised more or less regularly, according to their complexity. Therefore, they return to our After-Sales Service workshop and pass through the hands of our highly skilled watchmakers, who will verify that they operate correctly, and will also check the mechanics of the movement.

A PASSION FOR DETAILS

Right from the conception of a new model, we take the utmost care in the smallest details and parts which constitute a watch, to guarantee a complete satisfaction, in regards to both the design as well as the comfort on the wrist.

Hand-polished cases, refined and decorated dials featuring various guilloché patterns in the centre and hand-applied indexes are some of the details we pay attention to for our clients' pleasure.

We, at Frederique Constant, have a passion for creating beautiful, high-quality watches with impeccable finish. Every detail of each timepiece, whether technical or aesthetic, is equally important.

Our movements are also treated with just as much care and attention. Decorations such as "Côtes de Genève" or "perlage" - which are executed in the most meticulous way - can be admired through the sapphire case back, thus adorning the main plate, the bridges or the oscillating weight.

Most of the movement's components are carefully angled in order to break and polish their bevelled edges, for an even more refined aesthetic.

The watch straps, whether in leather or in metal, are systematically designed for comfort while being worn. Finally, our buckles are elegantly decorated with the Frederique Constant crest.

FC-900 CALIBERS SERIES

HEART BEAT

The first Heart Beat timepiece was launched in 1994. The purpose of the Heart Beat development was to show that these models were equipped with a mechanical movement. With this in mind, Frederique Constant added an aperture at the position of the balance wheel to show the beauty of the movement, of its “heartbeat”.

At the time, this very innovative creation allowed the Maison to demonstrate its watchmaking skills with ingenuity. However, a forgetful incident with the patent for this particular invention allowed other brands to find inspiration and duplicate what Frederique Constant tried so hard to present as its own. Following this unfortunate event, the Brand found resourceful ways to claim its inventive spirit.

In 2004, Frederique Constant presented its first ever in-house movement, which happened to be a manual winding version of the Heart Beat movement. Major changes were applied to this new watch, such as shifting the “heartbeat” to 6 o’clock, which required ultimate craftsmanship and propelled the collection to a higher degree of technique and elegance. In the following years, several modifications were made to the original design, thus awarding the Brand with many new models.

FC-700 CALIBERS SERIES

ALL FUNCTIONS ADJUSTABLE BY THE CROWN ONLY

The Frederique Constant FC-700 caliber series, originally developed and launched in the 2009 Maxime Manufacture collection, is proof that wonderful technological advances can be made and are still incredibly easy to use.

Since then, our designers, engineers, technical team and dedicated watchmakers have all worked together to develop the FC-700 caliber series. What started as a relatively basic caliber, has evolved. Today, the full range of features and complications of any timepiece using an FC-700-series caliber can be quite simply adjusted via the watch's single crown.

This development represented a major breakthrough in the Maison's manufacture of luxury Swiss timepieces. The FC-700 caliber, which took years to design and develop, acted as the springboard for future advances in Frederique Constant timepieces.

HIGHLIFE

HIGHLIFE COLLECTION

HONORING THE PAST WHILE SHAPING THE FUTURE

In 1999, Frederique Constant launched the first models of its Highlife collection. Embodied in a unique design, they were characterized by their integrated strap. In 2020, the Maison perpetuated this ingenious concept, and brought this collection back in the spotlights with three models fitted with this intelligent feature.

Leather, rubber, or steel then embellish the watch as desired, allowing it to display a classic or rather sporty look. Changing the bracelet has become as simple as a child's play. Thanks to the integration of two push-pins at the end of the bracelet, the transition from one to the other is very easy. A simple pressure on these pushers releases the bracelet from the case, and vice versa when integrating the new one.

A fastidious work, this quick release system was designed to go unnoticed. Discreet and delicately articulated, it fits perfectly into the curves of the watch, whose proportions have been carefully thought out to ensure optimum comfort.

MANUFACTURE COLLECTION

With most models produced in limited editions, the Manufacture collection from Frederique Constant is the most prestigious and technologically advanced range presented by the Brand. Featuring beautiful dials engraved with delicate guilloché decorations, along with sleek and elegant cases, these timepieces are certain to attract admiring glances.

The Manufacture collection represents the pinnacle of Swiss watchmaking craftsmanship and expertise. It is a testament to the brand's commitment to producing exceptional timepieces with in-house movements, developed, and produced by Frederique Constant. These movements are the result of years of research, development, and innovation, embodying the brand's quest for technical excellence. The movements are meticulously assembled and finished by hand, ensuring the utmost precision and reliability.

Whether you're a seasoned watch aficionado or someone seeking a timepiece that exudes elegance and sophistication, our Manufacture collection offers a range of exceptional watches that are bound to exceed our customers' expectations.

HIGHLIFE COLLECTION

Over 20 years ago now, back in 1999, Frederique Constant introduced the very first Highlife watches. In 2020, the Maison revived the iconic design, with resolutely modern curves rooted in the 21st century. Like the original inspiration, the Highlife collection has an integrated bracelet.

The Highlife collection from Frederique Constant is a stunning line of timepieces that embodies the brand's commitment to elegance, versatility, and modern sophistication. With its contemporary design, attention to detail, and impeccable craftsmanship, the Highlife collection offers a range of watches that are both stylish and functional.

Whether you're attending a formal event, exploring the city, or enjoying a casual outing, the Highlife collection offers a range of watches that can effortlessly transition from one occasion to another, elevating your style and complementing your lifestyle.

MOVING FORWARD

Like the original inspiration, the Highlife collection has an integrated bracelet. The lack of horns allows for greater flexibility and helps the watch sit naturally on the wrist. The integrated design is infinitely more complicated to conceive than any strap with horns. The process requires perfect continuity between the lines of the case and the links, a smooth, regular but gradual transition to the clasp and natural fluidity that should be almost imperceptible.

Not only has Frederique Constant managed to achieve this natural continuity, but the integrated system allows the wearer to change the bracelet with ease. With no need for any tools or accessories, you can change the look of your watch just by pressing. From a steel bracelet, a leather, crocodile suede or rubber strap, the Highlife can be restyled in seconds.

To switch between a sporty, urban, or stylish look, all you need to do is press on the two push-pins at the end of the bracelet or the strap to disconnect it from the case and, just as easily, click a new one into place. Frederique Constant supplies all Highlife models with two alternatives at no additional cost. A leather strap or a steel bracelet are fitted as standard and accompanied by a second rubber strap.

CLASSICS COLLECTION

The Classics collection from Frederique Constant is a testament to the brand's commitment to timeless elegance, understated luxury, and traditional Swiss watchmaking. This collection embodies the essence of classic design principles while incorporating contemporary elements to create watches that are sophisticated. The cases feature clean lines, graceful curves, and a harmonious balance of proportions, reflecting the timeless aesthetic that has defined the world of horology for generations.

With its refined design, reliable movements, and exceptional value, the Classics collection offers a range of watches that capture the enduring beauty and allure of classic timepieces.
